

Nokia 8265 Keypad Replacement

How to fix the keypad if the buttons are not responding correctly.

Written By: Jack

TOOLS:

- [iFixit Opening Tools](#) (1)
 - [Soft Cloth](#) (1)
-

Step 1 — Keypad

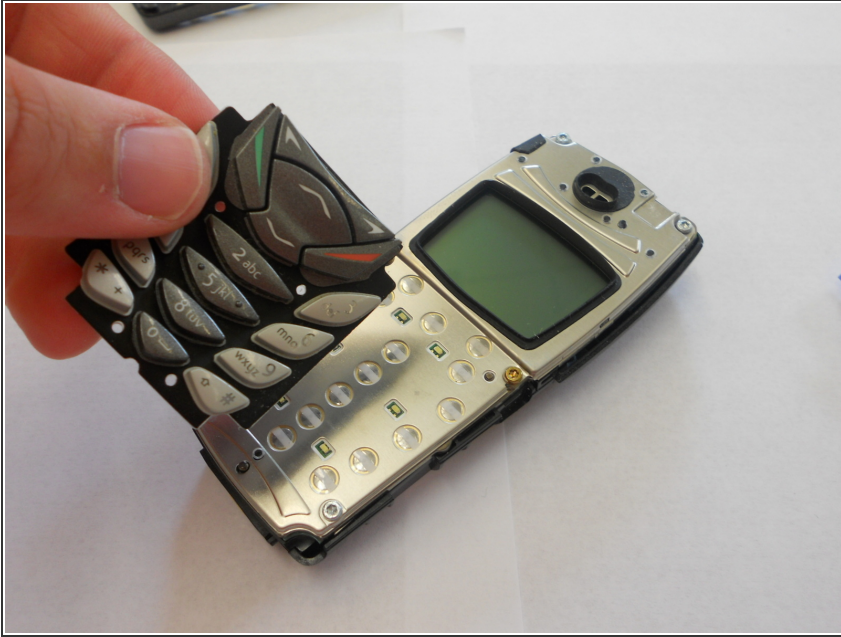

- Using a plastic opening tool, wedge the tip of the tool into the side of the phone's faceplate
- To pry open, wiggle/twist the tip of the tool, until faceplate pops up.

Step 2

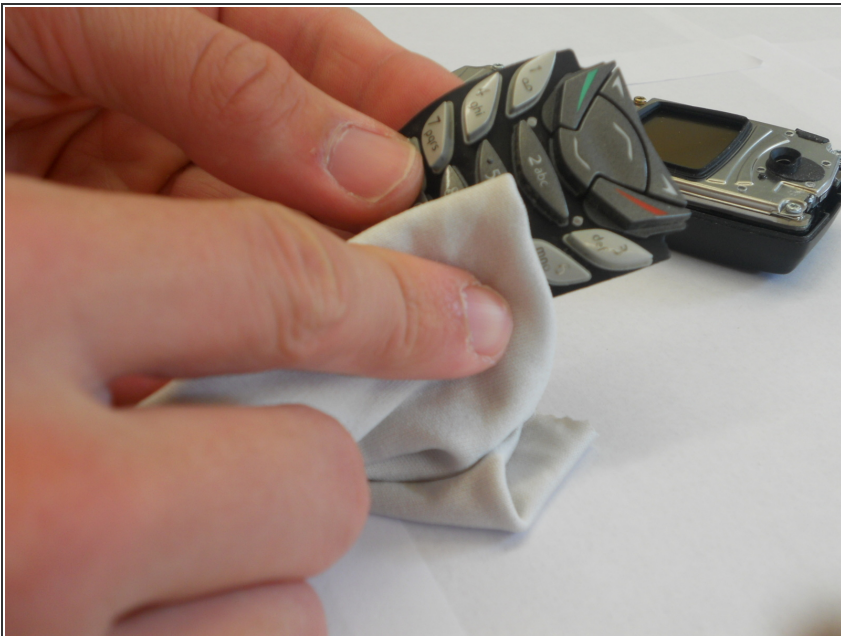

- Once popped off, remove the faceplate entirely, exposing the keypad.

Step 3

- You can pick up the keypad with ease, as it is not attached to the phone itself.

Step 4

- To clean keypad if it is not functioning properly, use a cloth to wipe away any spills, or water damage

If cleaning off keypad does not work, insert your new keypad, and follow steps in reverse order to reassemble your device.
